

ZACHARY GOULD

Solutions Engineer

zacharyigould@gmail.com | linkedin.com/in/zacharygo | Eligible to work in the U.S. & Israel

Solutions-focused engineer with 4+ years architecting and troubleshooting enterprise API, SDK, and CDN-backed media infrastructure at Cloudinary. Skilled at designing novel technical solutions under ambiguity, leading proof-of-concepts and RFP/RFI response, and translating complex requirements into scalable implementations for Fortune 500 accounts. Full-stack development background, with fluent Spanish and conversational Hebrew for global technical engagements.

Solution Architecture • API & SDK Integration • CDN / DNS / TLS Infrastructure • POC Leadership • Technical Discovery & RFP Response • Cross-Functional Enablement

PROFESSIONAL EXPERIENCE

Cloudinary, Senior Developer Support Engineer (Solutions-Focused) 2022 – Present

Tel Aviv, Israel

- Architect and validate scalable technical solutions spanning APIs, SDKs, asset-transformation pipelines, caching, and CDN-backed delivery for a portfolio of 4 enterprise accounts representing \$19M+ in combined annual recurring revenue, including Cloudinary's single highest-earning account.
- Extend technical ownership well beyond those 4 dedicated accounts, joining live calls and designing/implementing custom workflows for a much broader base of small and enterprise customers across Cloudinary's portfolio.
- Act as technical advisor across the sales cycle: lead proof-of-concepts, complete RFP/RFI technical sections, and field live technical questions on exploratory sales calls to support new and expanding enterprise opportunities.
- Devise novel solutions to previously unsolved architectural problems from limited precedent; publish internal documentation and reusable tooling adopted across the regional Professional Services team.
- Serve as knowledge expert and escalation owner for performance-sensitive, architecturally complex environments spanning CDN, TLS, and DNS infrastructure; identify solution risk and mitigation paths for enterprise implementations.
- Design and deliver 14+ technical workshops as lead technical contact at conferences and customer on-site engagements across India, Israel, and the U.S., covering DNS/TLS/CNAME architecture, SQL/Snowflake/Redash analytics, and advanced media-transformation scripting.
- Bridge Support, Product, Engineering, and enterprise stakeholders across multiple standing task forces, translating customer and market feedback into product and process improvements.

Hold My Ticket, Full Stack Developer 2021 – 2022

- Designed and built customer-facing and internal platforms on a 3-person engineering team using PHP, JavaScript, React, React Native, and SQL; advanced from junior to mid-level developer within the role.
- Engineered payment-processing flows, authentication systems, and production-scale application infrastructure supporting live transaction workloads.

Ale Republic Brewery, Founder & Systems/Production Engineer 2014 – 2020

- Designed and built the company's full operational infrastructure from scratch, including production systems, inventory management, staffing/scheduling, and distribution logistics, scaling a hobby-level operation into a 7-barrel production brewery and restaurant.
- Grew the team from 2 to 20 employees and monthly revenue 20x (from \$5K+ to \$100K+); successfully exited via sale to an outside buyer.

EDUCATION

B.A., Communications, Journalism & Spanish University of New Mexico

Full Stack Development Program, Israel Tech Challenge 2020 – 2021

Tel Aviv, Israel

- Capstone internship at 927 Developments (commercial real estate brokerage): sole technical resource; independently designed, built, and managed the company's website and web presence.

TECHNICAL SKILLS

Languages / Frameworks: JavaScript, PHP, Python, SQL, React, React Native, Node.js, Express

Architecture & Infra: REST APIs, SDKs, Webhooks, OAuth/JWT/SSO, Media Transformation Pipelines, CDN & Edge Caching, AWS, Google Cloud Platform, Docker

Data & Tooling: MongoDB, Snowflake, Redash, Firebase, Git, Figma, Prisma, Jest

Emerging Tech: AI agent infrastructure, MCP (Model Context Protocol) development

Languages: Native English, Fluent Spanish, Conversational Hebrew
